WATER TEMPERING SYSTEMS

Cool Trough® Water Tempering Systems

Water entering a drainage system cannot exceed 140°F, which could cause problems with PVC pipes and create other safety & environmental issues. Cool Trough® is designed to activate when drainage water is at 130°F. The mixing valve turns on, allowing cool inlet water to “temper” the dangerously hot drainage water. When the water is reduced down to 120°F, the mixing valve turns off, thus saving water.

- Lift-out grating available in anti-slip gray fiberglass or stainless steel.
- 4" diameter drain with removable basket style strainer.
